

Gigabit Ethernet The Accepted Evolution

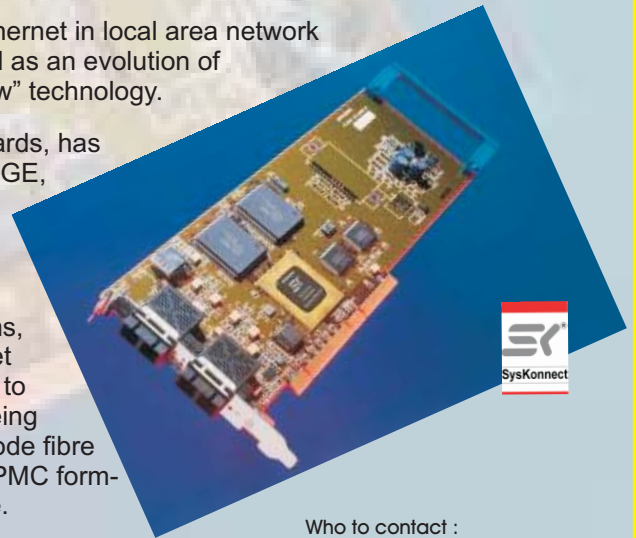

C²I²
Systems

Thanks to extensive use of Ethernet and Fast Ethernet in local area network applications, Gigabit Ethernet has been accepted as an evolution of common 10/100 Ethernet although it is still a "new" technology.

SysKconnect, Europe's leader in FDDI network cards, has embraced this technology and launched SK-Net GE, a Gigabit Ethernet Server Adapter specifically to boost performance of corporate backbones.

Represented in South Africa by high-speed, mission-critical networking specialist, C²I² Systems, SysKconnect's membership of the Gigabit Ethernet Alliance emphasises the company's commitment to providing standard-compliant solutions. These being available in copper, multimode fibre and singlemode fibre media options, single-port or dual-port, PCI and PMC form-factors. A wide range of drivers are also available.
